Re: 1522 Fishburn Avenue
Los Angeles, CA

Dear Ms. Norwood:

On February 6, 2004, I observed the removal of an underground storage tank at the above-referenced site. The tank appeared to be in fair condition, and holes were noted in some areas along the top and sides of the tank.

Three soil samples were collected, one from beneath each end of the tank, and one from the eastern end of the excavation in an area of slightly discolored soil. The soil along the sidewalls of the tank excavation consisted of a massive dark brown clay containing minor amounts of sand. With the exception of the small area of discolored soil in the eastern part of the excavation, the soil did not appear to be impacted.

The tank removal operations and sampling activities were completed under the oversight of the undersigned Registered Geologist. If you have any questions concerning this matter, please don't hesitate to contact me.

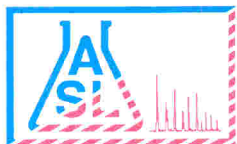

Sincerely,

Paul N. McCarter
Registered Geologist #5243
Certified Hydrogeologist #HG 543

TANK REMOVAL PERMIT

Date: 12/31/03 Permit No. 004-A06001 (from log) County Public Works Permit # 400239
Tank Site-Occupant Name 1510 FISH BURN AVE - ATLOS RUBBER Telephone No. 223-266-4570
Tank Site Address ✓ City LOS ANGELES
Name of Contractor STRONGARM ENV. License No. 766463 3-HAZ, C-57
Address 3562 POMER ST. City: NORMAN, CA Telephone No. 562-404-6656

FIRE DEPARTMENT APPROVAL TO REMOVE UNDERGROUND TANK (S) WILL BE GRANTED UNDER SECTION 4.101 AND ARTICLE 79 OF THE FIRE CODE UNDER THE FOLLOWING CONDITIONS:

1. Provide documentation of permit from the Los Angeles County, Department of Public Works.
2. Provide documentation of Permit from other agencies as required.
3. Number of tanks to be removed 2 Site log for each.
4. Tank Removal Permit and Site Log shall be accurately maintained for each tank and available for review by inspector on request.
5. Current tank removal procedures in Regulation #22 have been read and understood by permittee and the tank(s) shall be handled as:
☐ HAZARDOUS
☒ NON-HAZARDOUS
☐ ABANDONED IN PLACE
6. The following sequence is recommended to insure prompt and successful removal inspections:
 - a. Contact the Department of Public Works and make arrangements for an inspection date and time.
 - b. Contact the local Fire Prevention Office, at least 48 hours before removal, for date and time approval.
7. A completed copy of the Tank Verification and Site Log shall be given to the fire inspector upon completion of the tank pull.

THIS PERMIT IS NONTRANSFERABLE AND IS GRANTED ONLY FOR SITE INDICATED ABOVE AND MAY BE REVOKED FOR FAILURE TO COMPLY WITH THE FIRE DEPARTMENT REGULATIONS OR THE ITEMS LISTED ABOVE.

I have completely read and fully understand The foregoing Fire Department requirements and warnings that apply to this permit.

In the event of any physical or atmospheric adversely affecting the STANDARD SAFETY DESIGNATIONS assigned to any of the above spaces, or if any doubt, immediately stop all work and contact the undersigned Marine Chemist.

QUALIFICATIONS: Transfer of ballast of manipulation of valves or closure equipment tending to alter conditions in pipe lines, tanks or compartments subject to gas accumulation, unless specifically approved in this Certificate, requires inspection and endorsement or reissue of Certificate for the spaces so affected. All lines, vents, heating coils, valves, and similarly enclosed appurtenances shall be considered "not safe" unless otherwise specifically designated.

STANDARD SAFETY DESIGNATIONS (partial list, paraphrased from NFPA 306 Subsections 2-3.1 through 2-3.5, and Subsection 6-3.2)

SAFE FOR WORKERS: Means that in the compartment of space so designated: (a) the oxygen content of the atmosphere is at least 19.5 percent by volume; and that, (b) toxic materials in the atmosphere are within permissible concentrations; and that, (c) the residues are not capable of producing toxic materials under existing atmospheric conditions while maintained as directed on the Marine Chemist's Certificate.

NOT SAFE FOR WORKERS: Means that in the compartment of space so designated, the requirements of Safe for Workers have not been met.

ENTER WITH RESTRICTIONS: Means that in any compartment or space so designated, entry for work may be made only if conditions of proper protective equipment, clothing, and time are specified.

SAFE FOR HOT WORK: Means that in any compartment designated: (a) oxygen content of the atmosphere is at least 19.5 percent by volume, with the exception of inerted spaces or where external hot work is to be performed; and that, (b) the concentration of flammable materials in the atmosphere is below 10 percent of the lower flammable limit; and that, (c) the residues are not capable of producing a higher concentration than permitted by (b) above under existing atmospheric conditions in the presence of fire, and while maintained as directed on the Marine Chemist's Certificate; and further, that, (d) all adjacent spaces containing or having contained flammable or combustible materials have been cleaned sufficiently to prevent the spread of fire, or are satisfactorily inerted, or, in the case of fuel tanks or lube oil tanks, or engine room or fire room bilges, have been treated in accordance with the Marine Chemist's requirements.

NOT SAFE FOR HOT WORK: Means that in the compartment so designated, the requirements of Safe for Hot Work have not been met.

CHEMIST'S ENDORSEMENT. This is to certify that I have personally determined that all spaces in the foregoing list are in accordance with NFPA 306 Control of Gas Hazards on Vessels and have found the condition of each to be in accordance with its assigned designation.

"The undersigned acknowledges receipt of this Certificate under Section 2-6 of NFPA 306 and understands conditions and limitations under which it was issued."

This Certificate is based on conditions existing at the time the inspection herein set forth was completed and is issued subject to compliance with all qualifications and instructions.

April 6, 2004

Subject: Soil Sampling
Altos Rubber, Inc
1522 Fishburn Ave. L.A.

On April 6th 2004, soil samples were collected under my direct supervision by Ms. Linda Norwood of Targhee, Inc. The samples were collected as part of an underground storage tank removal operation at Altos Rubber, Inc., 1522 Fishburn Avenue, Los Angeles, CA. The samples collected by Ms. Norwood were used for analysis to determine potential hydrocarbon impact of the soils from the operation of the underground storage tank. The samples were grab samples collected by hand from the bucket of a backhoe. Three discrete locations were sampled with the backhoe from areas directly beneath the tank. The first location sampled (sample EB) was approximately 14 feet below surface level (bsl) on the eastern portion of the tank excavation. The second location (sample WB) was approximately 14 feet bsl from the western portion of the excavation. The third and final sample (sample CB) was collected approximately 16 feet bsl from the center of the excavation.

Unified Soil Classification Soil Type and description of the soils sampled are as follows:

EB (East Bottom)

Soil Type: CL

Dark gray-green clay, firm, moist, very slightly silty, blocky structure. A moderate hydrocarbon odor similar to paint solvent was observed from the sample.

WB (West Bottom)

Soil Type: CL

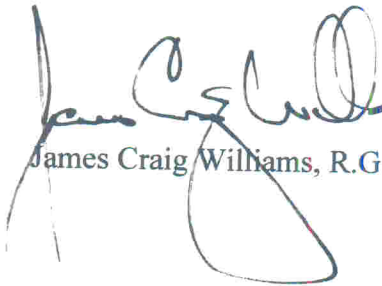

Dark gray-green silty clay, firm, moist, common blocky structure, grading to clayey silt. The sample had a moderate hydrocarbon odor similar to paint solvent.

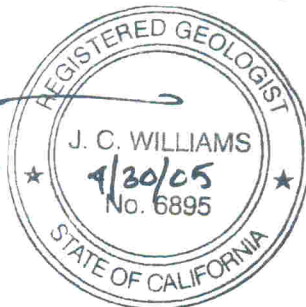

CB (Center Bottom)

Soil Type: CL

Dark gray-green silty clay, firm, moist, common cobbles and gravel. The sample had a moderate hydrocarbon odor similar to paint solvent.

NOTE: The presence of large well rounded granitic cobbles along with angular well graded gravel in a silty clay matrix seen at the 16'bsl sample may indicate that all of the material sampled could be artificial fill.

James Craig Williams, R.G.
